## ABB

OPERATION, MAINTENANCE, AND INSTALLATION GUIDE

## Zenith ZTX series

For ZTX series automatic transfer switches, 30-1200 A, 200-480 Vac

## Receiving, handling and storage

## Warning

Indicates a hazardous situation that, if not avoided, could result in death or serious injury.

## HAZARD OF EQUIPMENT OVERTURNING

When moving with a fork lift, do not remove the shipping packaging until the device is in its final location.

## Failure to follow this instruction may result in personal injury or equipment damage.

## Receiving and handling

Upon receipt, carefully inspect the transfer switch for damage that may have occurred during transit. If damage is evident, or there is visible indication of rough handling, immediately file a damage claim with the transportation company, and notify your local ABB sales office.

Do not remove the shipping packaging until ready to install the switch.

## Storage

If the unit will not be placed into service immediately, store the transfer switch in its original package in a clean, dry location. To prevent condensation, maintain a uniform temperature. Store the unit in a heated building, allowing adequate air circulation and protection from dirt and moisture. Storing the unit outdoors could cause harmful condensation inside the transfer switch enclosure.

# Read these safety instructions carefully before using this product! 

Danger
Indicates a hazardous situation that, if not avoided, will result in death or serious injury

## HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Apply appropriate personal protective equipment and follow safe electrical work practices.
- This equipment must only be installed and serviced by qualified electrical personnel.
- Before performing visual inspections, tests, or maintenance on the equipment, disconnect all sources of electric power. Assume that all circuits are live unless they are completely de-energized, tested, grounded, and tagged. Pay particular attention to the design of the power system. Consider all sources of power, including the possibility of backfeeding.
- Disconnect all sources of electric power before removing or making source side or load side connections to the transfer switch.
- Always use a properly rated voltage sensing device at all line and load connections to confirm transfer switch is disconnected from all live electrical sources.
- Turn off power supplying transfer switch before doing any other work on or inside switch.

Failure to follow these instructions could result in death or serious injury.

## 1. Introduction

This manual describes the installation, basic operation, and maintenance of the Zenith ZTX series (30-1200A, 200480 Vac ) automatic transfer switches, manufactured by ABB. Installation instructions for the transfer switch and available accessories can be found in chapters 9 and 10.

### 1.1 Hazard Categories

The following important highlighted information appears throughout this document to warn of potential hazards or to call attention to information that clarifies a procedure.

Carefully read all instructions and become familiar with the devices before trying to install, operate, service or maintain this equipment.

## Danger

Indicates a hazardous situation that, if not avoided, will result in death or serious injury.

## Warning

Indicates a hazardous situation that, if not avoided, could result in death or serious injury.

Caution
Indicates a hazardous situation that, if not avoided, could result in minor or moderate injury. Failure to comply with these instructions may result in product damage.

## Notice

It is used to notify of practices not related to personal injury. Failure to comply with these instructions may result in product damage.

### 1.2 Definitions

## ATS

Automatic transfer switches

## Ekip

Electronic accessories / Ekip-modules

## HMI

Control interface (Human Machine Interface), operating and configuration

## Programming port

Only for Ekip Programming and Ekip Bluetooth -modules (USB port)

## Slide switch

Switch for operating mode selection

## Zenith ZTX series ATS

Small frame residential, commercial, \& light industrial enclosed automatic transfer switches, product name

### 1.3 Warranty

This document is based on information available at the time of its publication. While efforts have been made to ensure accuracy, the information contained herein does not cover all details or variations in hardware and software, nor does it provide for every possible contingency in connection with installation, operation, and maintenance. Features may be described herein that are not present in all hardware and software systems.

ABB Zenith assumes no obligation of notice to holders of this document with respect to changes subsequently made. ABB Zenith makes no representation or warranty, expressed, implied, or statutory, and assumes no responsibility for the accuracy, completeness, sufficiency, or usefulness of the information contained herein. No warrantees of merchantability or fitness for purpose shall apply.

Contact your local sales office if further information is required concerning any aspect of the automatic transfer switch operation or maintenance.

## Warranty Period

The Warranty Period for ZTX series transfer switch products is twelve (12) months from the date of shipment.

Notes: This warranty is valid only in the United States and for products sold and installed within seller-specified countries.

Replacement parts are warranted for a period of 90 days when installed by a factory or an authorized service station.

Contact Service team at: +1 8006371738

### 1.4 Product Specification

## Quality Assurance

All ABB Zenith automatic transfer switches have been designed and manufactured to the highest technical standards. Strict procedures ensure firstclass product quality.

Figure 1.1: Sample nameplate

## Product Rating / Applicable Standards

For UL 1008 'withstand' and 'close on short circuit' ratings, refer to ABB publication number 1SCC303020C0201, "Zenith ATS, Powered by TruONE(TM) Withstand and Closing Ratings (WCR)"

## Product Serial Number

Please have the serial number available when communicating about the automatic transfer switch. The serial number can be found on the product nameplate affixed to each power panel assembly. See example below.

## 2. Product overview

- 

Zenith ZTX series automatic transfer switches, from 30 A up to 1200 A, are designed for use in residential, commercial, \& light industrial low voltage automatic transfer switch applications. Zenith ZTX series automatic transfer switches can be operated electrically by DIP control interface (HMI) or manually by using the handle. You can select the operating mode by the slide switch (Hand Locking - AUTO) on switch front. Configuration is done by DIP HMI.

The available operation types for automatic transfer switches:

- Open (standard) transition Zenith ZTX series ATS, type codes beginning ZXO_from 301200 A, 200-480 Vac

### 2.1 General overview

1 Automatic transfer switch
2 Embedded ATS control unit and mechanism
3 HMI unit (ZTX DIP)
4 Slide switch (Hand - Locking - AUTO) for selection of the operation mode
5 Padlocking the automatic transfer switch to prevent automatic and manual operation
6 Handle for manual operation
7 Position indication
8 Terminals for control circuit connections (behind the cover)
9 Place for auxiliary contact block
10 Location of product identification label
11 Programming port, only for Ekip Programming module and Ekip Connect software

### 2.1.1 Operation types

In this table you can find the details on the ZTX series operation type. For more information on HMIs, see chapter 2.2 and for wiring, see chapter 7.

Table 2.1 The differences of level types / operation types and the suitability of Ekip-modules

### 2.2 HMI

The HMI is the control interface (Human Machine Interface) of the ATS.

Zenith ZTX series has a DIP switch HMI with push buttons. The HMI is used for configuring parameters for automatic operation.

ZTX:
HMI with
DIP switches

### 2.3 Zenith ZTX series features

| Feature comparison | ZTX controls (DIP) |
| :---: | :---: |
|  |  |
| Ampere sizes available | UL: 30-1200 A |
| Rated voltage | 200-480 Vac |
| Rated frequency | $50 / 60 \mathrm{~Hz}$ |
| Phase system | Single and Three |
| Number of poles | 2, 3 and 4 |
| Neutral configuration |  |
| Switched | Yes |
| Product type |  |
| Open transition (I-II) | Yes |
| Voltage and frequency settings |  |
| Pick up Voltage Source 1 | Fixed 2\% above drop out |
| Drop out Voltage Source 1 | +/-5, 10, 15, 20 \% |
| Pick up Voltage Source 2 | Fixed 2\% above drop out |
| Drop out Voltage Source 2 | +/-5, 10, 15, 20 \% |
| Pick up Frequency Source 1 | Fixed 1\% above drop out |
| Drop out Frequency Source 1 | +/-5, 10 \% |
| Pick up Frequency Source 2 | Fixed 1\% above drop out |
| Drop out Frequency Source 2 | +/-5, 10 \% |
| Time delay settings |  |
| Override momentary Source 1 Outage, sec | 0, 1, 2, 3, 4, 5, 10, 15, 20, 30 |
| Transfer from source 1 to source 2, sec | 2 (0-3600 via Ekip Connect) |
| Override momentary Source 2 Outage, sec | 1,5 (0-60 via Ekip Connect) |
| Transfer from source 2 to source 1, min | $0,1,2,3,4,5,10,15,20,30$ |
| Generator stop delay, min | 30 secs or 4 mins |

Feature comparison ZTX controls (DIP)

|  |  |
| :---: | :---: |
| Source failure detections |  |
| No voltage | Yes |
| Undervoltage | Yes |
| Overvoltage | Yes |
| Phase missing | Yes |
| Voltage unbalance | Yes |
| Invalid frequency | Yes |
| Incorrect phase sequence | Yes |
| Features |  |
| Controls | DIP + keys |
| LED indications for ATS, S1 and S2 status | Yes |
| Open transition - Standard digital inputs/outputs | $0 / 1$ |
| Programmable digital inputs/outputs | No |
| Auto config (voltage, frequency, phase system) | Yes |
| Source priority | Source 1, No priority |
| Manual retransfer | Yes |
| In-phase monitor (synchro check) | Yes |
| Genset exercising: on-load, off-load | Yes, via Ekip Connect |
| Load shedding | No |
| Real time clock | Yes |
| Event log | Yes, via Ekip Connect |
| Predictive maintenance | No |
| Harmonics measuring | No |

| Feature comparison | ZTX controls (DIP) |
| :--- | :---: |
|  |  |

| Table 2.2 ATS features not limited to what is in the table above |  |

### 2.4 Typical applications

Zenith ZTX series automatic transfer switches from 30 A up to 1200 A, are designed for use in emergency or standby systems to choose and to switch between two power sources. See possible supply phase scenarios on next page. You have to define your own supply phase system reference Chapter 4 / Navigating menu / Parameters: Power distribution systems. Factory setting: 3 phases with neutral.

Source 1
Source 2

Fig. 2.3 Typical applications of automatic transfer switches

| $\mathbf{D}$ | E | F |
| :--- | ---: | ---: |
| $200-480$ Vac L-N | $200-480$ Vac L-L | $200-480$ Vac L-L |

Three-phase, with high leg delta

Fig. 2.4 Possible supply phase scenarios

### 2.5 Sequence of Operations

### 2.5.1 Switching sequence / Automatic

### 2.5.1.1 SOURCE 1 Priority <br> (SOURCE 2 = Generator)

The switching sequence can be summarized in the following steps:

- An anomaly occurs on SOURCE 1
- Override momentary S1 outage delay
- Generator start
- SOURCE 2 OK
- Transfer from S1 to S2 delay
- Transfer switch (SOURCE 2) to position II

The re-transfer sequence can be summarized in the following steps:

- SOURCE 1 is restored
- Transfer from S2 to S1 delay
- Transfer switch (SOURCE 1) to position I
- Generator stop delay
- Generator stop
- SOURCE 2 off

Table 2.3 Automatic Switching Sequences, SOURCE 1 Priority (SOURCE 2 = Generator)

### 2.6 Special features description

### 2.6.1 Automatic configuration

Basic system parameters can be automatically configured from the HMI: rated voltage, rated frequency, each supply power distribution system type, and neutral location will be recognized and set by the controller. Other parameters are set to factory values; see Chapter 4, Navigating menu.

### 2.6.2 In-phase monitor

In-phase monitor is a feature that calcuates the phase difference of supply lines, preventing transfer when sources are not in sync. The user can set On/Off from the HMI. When the in-phase monitor is set to On, the device measures and detects when both sources are in sync with each other. The ATS will allow transfer from SOURCE 1 (S1) to SOURCE 2 (S2) only when they are in sync with each other. Any of these conditions will prevent source transfer when In-phase monitor is set to On:

- Phase difference between sources remains greater than 5 degrees
- Phase order between sources is not the same
- Voltage amplitude is out of range
- Phase is missing
- Voltage is asymmetric
- Frequency is out of range

### 2.6.3 Powering supply scenarios

Device can be powered by the the following methods:

- Direct from SOURCE 1 or SOURCE 2: Controller and HMI are powered and ATS can be operated electrically.
- Programming port on HMI (USB port): Only the main board is powered. Allows software update to main device and connection of Ekip Connect commissioning tool.

## 3. General operation

### 3.1 Position indication

Contact movement and position indication is indicated in the figure below, open transition I-II (or II - I).

Fig. 3.1 Contact movement / position indication:
Type ZTX, Open transition

### 3.2 Operating and locking

The operation mode is selected by using the slide switch (Hand - Locking - AUTO) located on the front of the automatic transfer switch (ATS).

- Hand-position = Manual mode, enabling emergency manual operation using the handle. ATS functionality is disabled when in Hand position.
- Lock-position = Locking mode, padlocking the automatic transfer switch in a specific position to prevent automatic and manual operation.

## Notice

The handle has to be in its stored position (not in use), after which the slide switch will move to the Locking mode automatically and the switch is allowed to be padlocked. To set the operating handle back to its place, refer to the left most picture in Fig. 3.6.
> - AUTO-position = Automatic control mode enabled, ATS is operable in Automatic mode or from the HMI manual control keys. When the slide switch is moved to the AUTO position, the ATS is functioning immediately in the automatic control mode.

Locking mode

Fig. 3.2 Above the selection of the operation modes (Manual or Automatic) by the slide switch. Below padlocking the automatic transfer switch; The handle has to set standby slot (not in use), after that the slide switch will move to the Locking mode automatically and the switch is allowed to be padlocked.

### 3.3 Manual handle operation

To mount the handle in the operating position, turn the slide switch to the Manual mode (Hand), lift the handle from its place inside and place it to the operating position.

More information, see animation: Manual and automatic operation - TruONE® ATS (https://youtu.be/ bosvSPVi2sM).

Warning
Verify the condition of power source prior to manually transferring. Manual operation may result in out-of-phase transfer when both sources are energized.

Fig. 3.3 Mounting of the handle in the operating position

### 3.4 Return to Automatic mode, operating by HMI

When operating the automatic transfer switch by HMI, turn the slide switch to Automatic mode (AUTO).

Notice
The handle has to be standby slot (not in use) before turning to automatic mode.

When the slide switch is moved to the AUTO position, the ATS will enter auto mode after a 3 second delay.

Fig. 3.5 The operating handle must set back to standby slot before moving to the automatic mode

### 3.5 LED functionality in HMI

At the top of ZTX 30-1200 A, 200-480 Vac ATS, there is a set of LEDs intended to model the state of the transfer switch sources, position, alarms, and mode. A considerable amount of information can be deciphered from the LED states. See the tables below for more information.

Fig. 3.6 LEDs in ZTX, open transition I-II.

| LED | Indication | Description |
| :---: | :---: | :---: |
| Power led |  |  |
| () | ON, fixed light $\square$ | Power supply and communication present |
| $\Delta$ | 2 quick flashes/1s ■! $^{\text {a }}$ | Power supply present, communication absent between switch and the HMI |
| AUTO | OFF | No power available for HMI. |
| S1 and S2 leds |  |  |
|  | ON, fixed light $\square$ | S1 or / and S2 is present and within user defined limits |
|  | 2 quick flashes/1s ${ }_{\text {-1m }}$ | Undervoltage |
|  | Flash/1 s, 90\%/10\% I | Invalid frequency |
|  | Flash/1 s, 10\%/90\% \\| | Unbalance |
|  |  | Overvoltage |
|  | Flash/2 s, 50\%/50\% $\square$ | Incorrect phase sequence |
|  | Flash/4 s, 50\%/50 \% | Phase missing |
|  | Flash/1 s, 50\%/50\% ■ | Generator stop delay ongoing |
|  | OFF | No voltage |

| I and II leds |  |  |
| :---: | :---: | :---: |
|  | ON, fixed light $\square$ | Switch position is indicated with fixed light in I, O or II led. Only one can be on simultaneously |
|  | Flash/1 s, 50\%/50\% ■ | Delay ongoing. Going to move away from the blinking status |
| Load led |  |  |
|  | ON | Supply ok and connected to load |
|  | OFF | Not connected to load |
| Auto led |  |  |
| $\circlearrowleft$ <br> $\triangle$ <br> AUTO | ON, fixed light $\square$ | Switch is in automatic mode |
|  | Flash/1 s, 50\%/50\%■■ | Test on load |
|  | Flash/1 s, 90\%/10\% I | Test off load |
|  | 5 flashes/1 s, 50\%/50 \% \\||l||l|||||| | Autoconfig completed |
| Alarm led |  |  |
| $\begin{aligned} & 1 \\ & \Delta \end{aligned}$ | OFF | No alarms |
|  | ON, fixed light $\square$ | Handle attached, locked, other alarm |
|  |  | Control Alarm |
|  | 5 flashes/1 s, 50\%/50\% \\|IIIIIIIII | Auto configuration ongoing |
|  | Flash/1 s, 50\%/50\% ■ | Control Retry |
|  | Flash/1 s, 10\%/90\% \\| | Auto mode off |

[^1]
### 3.6 Using Level 2 (DIP) control interface HMI

### 3.6.1 Keypad

ZTX_, open transition, I-II
Fig. 3.7 Keypad HMI with DIP-switches

1 Lamp test: Turns on all LEDs simultaneously to confirm all LEDs are operational
2 Off load test: Initiates off load test (Starts generator but does not transfer the load to the generator)
3 On load test: Initiates on load test (Starts the generator and transfers the load to the generator)
4 Bypass time delay: Bypass any currently running time delay
5 Auto (Alarm reset): In the event of active switch control alarm (open I failure, close I failure, open II failure, close II failure), resets to no alarm state. If no active alarms, toggle between automatic/HMI control modes
6 I ON: Operate switch to I position
7 II ON: Operate switch to II position

## 4. Navigating HMI

### 4.1 Configuration by DIP switch

Fig. 4.1 DIP-switches for configuration in ZTX HMI

1 Auto config: Automatically detecting Source 1 and Source 2 parameters. Automatic configuration sequence is started by setting DIP to 'Start' position. Parameter detection is ready when AUTO LED flashes 5 times in 1 second. After this the DIP must be set to 'Ok' position to resume normal operation. Check power supply of the voltage source in case the Alarm LED keeps flashing instead of AUTO LED. This indicates that system
parameters cannot be detected from the supplied voltage.
2 In-phase monitor:
On: Enable in-phase monitor Off: Disable in-phase monitor
3 Priority:
No priority: Application 'Two Transformers / No Priority' selected. Source 1: Application 'S1-Transformer / S2-Generator' selected.

## 4 Manual retransfer:

On: Manual retransfer to priority source enabled (automatic retransfer disabled)
Off: Manual retransfer to priority source disabled (automatic retransfer enabled)
5 Dropout $\triangle \mathbf{U}^{1)} / \triangle \mathbf{F}$ :
Dropout voltage/frequency limit.
For example 5 \% / 5 \%:
Voltage source is considered acceptable when measured voltage is in range 0.95-1.05 nominal Voltage (Un) * Un and measured frequency is in range 0.95-1.05 x nominal frequency (fn).
6 S1 Failure delay: The time
(0/1/2/3/4/5/10/15/20/30 s) device waits after priority source failure before starting automatic transfer sequence from priority source to non-priority source.
7 S1 Return delay: The time (0/1/2/3/4/5/10/15/20/30 min) device waits after priority source return before starting automatic retransfer sequence from nonpriority source to priority source.
8 Generator stop delay: The time ( 30 s or 4 min ) device waits after transferring back to priority source before stopping the generator.

## 5. Electronic accessories

## Warning

Hazardous voltage may be present within the panel when connecting electronic accessories. Remove all sources of power to the ATS panel before connecting Ekip modules.

Ekip Connect Sofware and Bluetooth and Programming -modules are suitable for all ZTX 30-1200 A, 200-480 Vac automatic transfer switches, refer to chapters
5.1...5.3. for more details on:

- Ekip Connect -software
- Ekip Bluetooth -module
- Ekip Programming -module

Fig. 5.1 Programming and bluetooth-modules

### 5.1 Using Ekip Connect -software

Ekip Connect is a free software for communication and testing of ABB automatic transfer switches. The software is compatible with ZTX 30-1200 A, 200-480 Vac automatic transfer switches. It can be installed on PCs equipped with the Microsoft Windows® operating system. To download it, see the address below: http://www.abb.com/abblibrary/ DownloadCenter/

Fig. 5.2 Ekip Connect-software

With its communication function, it allows you to:

- Monitor the state of the automatic transfer switches connected and record information.
- Configure the automatic transfer switches with customized parameters.
- Create communication reports.
- Reset configurations.

Further information on the Ekip Connect application is available from the web site, see the address below, particularly the manual 1SDH000891R0002.

### 5.2 Using Ekip Bluetooth-module

The Ekip Bluetooth module allows connection via Bluetooth between the automatic transfer switch and a support device (PC, tablet, or smart phone) with the Ekip Connect software installed. Ekip Bluetooth -module is suitable to use with all ZTX 30-1200 A, 200-480 Vac automatic transfer switches.

The Ekip bluetooth module draws its power from a rechargeable lithium-polymer battery supplied with the unit. It is connected directly to the programming port (see Fig. 5.6) powers the controller without the need for auxiliary voltage supply. The programming port is only compatible for use with Ekip Bluetooth and Ekip Programming -modules.

### 5.2.1 LED indications

Ekip Bluetooth -module is switched on by pressing the power button on the side, and is equipped with two LEDs:

- The first LED illuminates in green with the device on and the battery charge, red with the device turned on and low battery.
- The second LED flashes blue with active Bluetooth communication.

[^2]
### 5.3 Using Ekip Programming -module

The Ekip Programming -module is suitable to use with all ZTX 30-1200 A, 200480 Vac automatic transfer switches. You can connect the module via the programming port, see Fig. 5.5. The programming port is only compatible for use with Ekip Programming and Ekip Bluetooth -modules.

Ekip Programming -module allows you to:

- With Ekip Connect software update the software and load, set and read the parameters

The Ekip Programming -module draws its power from the PC and connects one side directly to the programming port (see Fig. 5.6) and on the other to the USB port of the PC with the cable supplied.

### 5.3.1 LED indications

Ekip Programming -module turns on after connecting to the PC, and is equipped with two LEDs. The first, illuminates green indicating that the module is on, and the second, illuminates yellow indicating active communication.

Fig. 5.5 Programming port (USB port) is situated in the front of the HMI, on left side

## 6. Troubleshooting

Warning
Any troubleshooting should be conducted by trained and authorized personnel only.
Appropriate personal protective equipment (PPE) shall be used when troubleshooting the ATS panel.
Hazardous voltage may be present. Disconnect all power sources before performing work inside the ATS panel.
Failure to do so may result in serious injury or death.

Notice
Alarms, warnings, and information are directly viewable only via Ekip Programming or Bluetooth modules

### 6.1 Alarms

| Alarm condition | Fault | Action |
| :---: | :---: | :---: |
| Locked, Alarm LED on | Lock input activated | Unlock |
| Switch not in AUTO mode, Alarm LED on | Slide switch is in handle or lock position | Turn slide switch into the AUTO position |
| Phases crossed | Phase rotation of sources 1 and 2 are different | Connect the phases of both sources in the same order |
| S1 undervoltage | Voltage of source 1 is under the threshold level set in parameter "Dropout voltage, lower threshold" | Check the correlation between power source and device configuration |
| S1 overvoltage | Voltage of source 1 is over the threshold level set in parameter "Dropout voltage, upper threshold" | Check the correlation between power source and device configuration |
| S1 phase missing | One or two phases of source 1 are missing | Check the power source and connections |
| S1 unbalance | Phases of source 1 are not symmetric | Check the power source |
| S1 phase rotation | Phase rotation of source 1 is different from the value of parameter "Phase sequence" | Connect the phases according to the configuration |

[^3]| Alarm condition | Fault | Action |
| :---: | :---: | :---: |
| S1 invalid frequency | Frequency of source 1 is out of range set in parameters "Drop-out frequency, upper threshold" and "Drop-out frequency, lower threshold" | Check the correlation between power source and device configuration |
| S2 undervoltage | Voltage of source 2 is under the threshold level set in parameter "Dropout voltage, lower threshold" | Check the correlation between power source and device configuration |
| S2 overvoltage | Voltage of source 2 is over the threshold level set in parameter "Dropout voltage, upper threshold" | Check the correlation between power source and device configuration |
| S2 phase missing | One or two phases of source 2 are missing | Check the power source and connections |
| S2 unbalance | Phases of source 2 are not symmetric | Check the power source |
| S2 phase rotation | Phase rotation of source 2 is different from the value of parameter "Phase sequence" | Connect the phases according to the configuration |
| Frequency Difference | Frequency difference of voltage sources is greater than 3 Hz while inphase monitor is on | Alarm is active and transfer operations disabled as long as the frequency difference is above the accepted level |
| S2 invalid frequency | Frequency of source 2 is out of range set in parameters "Drop-out frequency, upper threshold" and "Drop-out frequency, lower threshold" | Check the correlation between power source and device configuration |
| Open I failure, Alarm LED blinking | Switch transfer from position I to O or II failed | Reset alarm by pressing Auto button or via menu page Operation / Alarm Reset |
| Close I failure, Alarm LED blinking | Switch transfer to position I failed | Reset alarm by pressing Auto button or via menu page Operation / Alarm Reset |
| Open II failure, Alarm LED blinking | Switch transfer from position II to O or I failed | Reset alarm by pressing Auto button or via menu page Operation / Alarm Reset |
| Close II failure, Alarm LED blinking | Switch transfer to position II failed | Reset alarm by pressing Auto button or via menu page Operation / Alarm Reset |
| Switch position alarm, Alarm LED on | More than one switch position indication inputs are activated | Switch service needed, contact ABB |
| Local bus | Communication between HMI and switch controller is off | Check connection |
| Control Voltage Failure | Control voltage dropped during switch control | Check power source |
| Control Voltage Low | Switch control voltage is below the minimum | Check power source |
| Configuration Error | Invalid configuration | Check parameter values |

[^4]
### 6.2 Warnings

| Message | Reason |
| :--- | ---: |
| S1 and S2 not in sync | Voltage sources are not synchronized |
| Voltage Not Calibrated | Calibration data in power module is invalid or unavailable, contact ABB |
| Current Not Calibrated | Calibration data in current measurement module is invalid or |
| unavailable, contact ABB |  |

[^6]
## Recommended Operating / Storage Temperature

Do not store the automatic transfer switch in corrosive environments above LC1 (sea salt mist) and G1 as per ANSI/ ISA-S71.04-1985. Failure to comply with these instructions may result in product damage. Store the automatic transfer switch and related accessories in a clean, dry location in their original packaging.

| Environmental | Value |
| :--- | ---: |
| Environments category | E |
| EMC environment | Environment A |
| Operating temperature (without derating) | $-20-+40^{\circ} \mathrm{C}$ |
| Operating temperature (with derating) | $-25-+70^{\circ} \mathrm{C}$ |
| Transportation and storage temperature | $-40-+70^{\circ} \mathrm{C}$ |
| Altitude (without derating) | Up to 2000 m |

Table 7.2 General technical data of automatic transfer switch

| Type | Voltage <br> [Vac] | Nominal <br> current $^{*}$ <br> [A] | Operating <br> transfer time <br> AUTO mode <br> I-II or II-I <br> [ms] | Contact <br> transfer <br> time |
| :--- | ---: | ---: | ---: | ---: |

Figure B

Figure $C$

## 8. Maintenance

## Warning

Any maintenance should be conducted by trained and authorized personnel only. Appropriate personal protective equipment (PPE) shall be used when performing maintenance on the ATS panel. Hazardous voltage may be present. Disconnect all power sources before performing work inside the ATS panel.
Failure to do so may result in serious injury or death.

## Maintenance Principle

The Zenith ZTX series 30-1200 A, 200-480 Vac automatic transfer switches, powered by TruONE, are designed so that the contacts last their designed lifetime without any routine maintenance needs. If there are abnormal conditions such as a fault or overload without adequate protection, or extreme environment conditions, a failure of ATS components may occur. Fortunately, all critical modules, including controller, power module, HMI, and solenoid mechanism, as well as accessories are readily replaceable. Refer to section 11 for replacement parts.

On the other hand, when the contacts have seen a damaging fault event, or have met the end of their endurance lifetime, the whole switch should be replaced which can be done easily by replacing the complete TruONE power panel within the enclosure.

In the case you suspect a failure may be due to manufacturer defect and covered under warranty, see section 1.3. Refer to section 7 technical data for ATS contact endurance and note that the number of operations can be viewed using Ekip Connect software.

## Routine Inspection

$A B B$ recommends a routine (such as annual) inspection to, e.g. , check electrical termination temperatures, ensure unit is clean, check voltage levels, test transfers, \# of operations, etc. to ensure everything is in proper working order.

Recommended annual inspection includes:

- Visual inspection both inside and outside of enclosure for damage or debris
- Test transfer of load
- Observe voltage levels of both sources within expected range
- Cable lug torque verification

## 9. Panel installation

> Before mounting the product, please, check the product identification from the product identification label, which is located on the front panel under the control interface unit (HMI). This label indicates the product model (type number), some important technical data information, suitable wire information, etc.

Notice
Final inspection of the equipment should be performed prior to energizing the automatic transfer.

Remove any dirt or debris that may have collected during shipment or installation. NEVER use compressed air. Doing so could drive dirt or other foreign objects into electrical or mechanical components, which could cause damage. Use an industrial-quality vacuum cleaner to remove any dirt or foreign objects.

Be certain all cable connections are correct and that the phase rotation of both sources match.

Inspect the engine start connections and verify the correct connection of all control wires.

Check all programmable set points and adjust as necessary. In addition, adjust any optional accessories as required.

Be certain that the actual lug torque values are in keeping with the requirements outlined in the instruction book to ensure the integrity of power connections.

Check to be sure that all covers and barriers are properly installed and fastened.

If any damage is found or suspected, file a claim as soon as possible with the carrier, and notify the nearest $A B B$ Zenith representative, or call 1-800-637-1738.

### 9.1 Basic Tools for Installation and Maintenance

| Tool | Task |
| :--- | :--- |
| $1 / 4$ " to $1 / 2^{\prime \prime}$ Allen head socket driver | Power cable connection |
| Torque wrench | Torqueing of the lugs and other hardware as required. <br> Range of device to be $50-500$ in-lbs $(5-57 \mathrm{~N}$-m $)$ |
| Torque screwdriver | Torqueing of control wire terminations, auxiliary contact <br> input terminals. $5-25$ in-lbs $(0.5-2.8 \mathrm{~N}-\mathrm{m})$ |
| Wire cutters/wire crimpers | Auxiliary contacts wire installation, Options installation |
| Voltmeter | Trouble shooting tool for measuring incoming voltage, <br> frequency, continuity and control signal transmission. |

Table 9.1 Required tools for common installation and maintenace tasks

### 9.2 Equipment Inspection and Storage

## Warning

When performing a hi-pot or dielectric test on the power section of the ATS panel, DISCONNECT the complete electronics, controller, and mechanism section of the ATS from the power section to avoid potential damage to the electronics.

Once you have received the transfer switch, inspect it for any damage. This includes damage to the enclosure, power panel, control panel and wiring harness. If any damage is found or suspected, file a claim as soon as possible with the carrier and notify the nearest ABB Zenith representative.

Before installation, if it is necessary, store the transfer switch in a clean dry place, protected from dirt and water. Provide ample air circulation and heat, if necessary, to prevent condensation.

See table 7.1 for recommended storage and ambient operating temperatures.

### 9.3 Lifting and Mounting the Panel

## Lifting guidelines

Adequate lifting means must be used to mount the transfer switch into place. The recommended method for moving the ATS, up to 1200A, is with lifting strap and lifting equipment rated for the equipment weight.

## Lifting, Mounting and Installation

The safe operation of your switch at all times is paramount to ABB. Please recognize that hazardous voltages and currents can exist during normal operation, and any maintenance on the transfer switch must be performed utilizing appropriate safety measures. Installation, adjustment, maintenance or removal of the switch must only be carried out by qualified personnel and with all power to the switch turned off. It is recommended that only qualified electricians be allowed to install or provide maintenance on the switch.

Prior to installation, store the transfer switch in a clean dry location, protected from dirt and water. Provide ample air circulation and heat if necessary to prevent condensation. See table 7.1 for recommended storage and ambient operating temperatures.

ABB Zenith automatic transfer switches are packaged as per the standard packaging regulatory standards requirement suitable for domestic and international shipment through all modes of transportation (air, sea and road). Once you unpack the units, please make sure all the components are received as per the BOM. For any missing items, contact your local ABB Zenith service representative.

Danger
Hazardous Voltage can Cause Severe Injury or Death
Turn OFF all power before installation, adjustment, or removal of transfer switch or any of its components.

Warning
Due to hazardous voltages and currents, ABB recommends that an ABB Certified technician or a qualified electrician perform the installation \& maintenance of the switch.

Danger
Hazardous Voltage can Cause Severe Injury or Death
Automatic Transfer Switch Equipment must be electrically grounded. Failure to do so may result in malfunction of the switch and possible damage to surrounding equipment.

Warning
Before drilling conduit entry holes or any accessory mounting holes, cover and protect the switch and control panel to prevent dirt and metal fragments from entering the mechanical and electrical components.

### 9.4 Mounting the

 automatic transfer switch
### 9.4.1 Mounting hole dimensions

Fig. 9.1 Automatic transfer switches, Mounting hole dimensions, refer to Table 9.2 for A1 and A2 values

## ZTX series enclosure mounting dimensions

| Type 1, in (mm) |  |  |  |  | Type 3R/4/4X/12, in (mm) |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Model | ATS Rating (A) | Poles | Height (A1) | Width (A2) | Height (A1) | Width (A2) |
|  |  | 2 | 28.0 (711) | 20.0 (508) | 33.3 (845) | 18.0 (457) |
|  | 30-200 | 3 | 28.0 (711) | 20.0 (508) | 33.3 (845) | 18.0 (457) |
|  |  | 4 | 28.0 (711) | 20.0 (508) | 33.3 (845) | 18.0 (457) |
|  |  | 2 | 42.0 (1067) | 20.0 (508) | 47.25 (1200) $^{1}$ | 18.0 (457) |
|  | 260 | 3 | 42.0 (1067) | 20.0 (508) | 47.25 (1200) ${ }^{1}$ | 18.0 (457) |
|  |  | 4 | 42.0 (1067) | 20.0 (508) | 47.25 (1200) ${ }^{1}$ | 18.0 (457) |
|  |  | 2 | 42.0 (1067) | 20.0 (508) | 47.25 (1200) $^{1}$ | 18.0 (457) |
| ZTX | 400 | 3 | 42.0 (1067) | 20.0 (508) | 47.25 (1200) | 18.0 (457) |
|  |  | 4 | 46.0 (1168) | 24.0 (610) | 51.25 (1302) | 22.0 (559) |
|  |  | 2 | 46.0 (1168) | 24.0 (610) | 51.25 (1302) | 22.0 (559) |
|  | 600 | 3 | 46.0 (1168) | 24.0 (610) | 51.25 (1302) ${ }^{1}$ | 22.0 (559) |
|  |  | 4 | 46.0 (1168) | 24.0 (610) | 51.25 (1302) ${ }^{1}$ | 22.0 (559) |
|  | 800-1200 | 3 | 66.0 (1676) | 35.0 (889) | 71.3 (1810) ${ }^{1}$ | 34.0 (864) |
|  | 800-1200 | 4 | 66.0 (1676) | 35.0 (889) | 71.3 (1810) ${ }^{1}$ | 34.0 (864) |

[^9]
### 9.5 Mounting of the handle

For more information of operating, position indication and the selection of the operating mode, see the Chapter 3.2 Operating and locking.

More information, see animation: Manual and automatic operation TruONE® ATS (https://youtu.be/ bosvSPVi2sM).

Warning
Verify the condition of power source prior to manually transferring. Manual operation may result in out-of-phase transfer when both sources are energized.

### 9.5.1 Mounting of the handle to operation position, manual mode

Fig. 9.2 Mounting the handle to the operating position; turn the slide switch to the Manual mode (Hand), lift the handle and place it to the operating position

### 9.5.2 Mounting of the Handle, automatic mode

Notice
When the slide switch is moved to the AUTO position, the ATS is functioning immediately in the automatic control mode.

Fig. 9.3 Before moving to the Automatic mode, the operating handle must set to its place. When the handle is in its place properly, the slide switch will move to the Locking mode automatically and the switch is allowed to be padlocked, if needed. From the Locking mode the slide switch can be moved to the Automatic mode
9.5.3 HMI Installation

Fig. 9.4 HMI can be mounted on the switch or the door, door drilling. HMI protective cover available as accessory, type OXEC21, provides protection against accidental contact, see Chapter 10.3., Mounting of accessories

### 9.6 Wire Connection

Notice
Lugs come pre-installed and torqued

ZTX series AL/CU UL Listed Solderless Screw-Type Terminals for External Power Connections

| Model | ATS Rating (A) | Source/Load | Lug Type | Wire Range | Cables per pole | Cables - Tightening <br> Torque ${ }^{1}$, lb-in ( $\mathrm{N}-\mathrm{m}$ ) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ZTX | 30-60 | Source 1 | OZXA-24 | 14-2/0 AWG | 1 | 50/5.7 |
|  |  | Source 2 / Load | OZXA-100 | 12-2/0 AWG | 1 | 132/15.0 |
|  | 100-200 | Source 1 | OZXA-25 | 6 AWG - 300 KCMIL | 1 | 275 / 31.1 |
|  |  | Source 2 / Load | OZXA-200 | 4 AWG - 300 KCMIL | 1 | 200 / 22.6 |
|  | 260-400 | Source 1 | OZXA-26 | 2 AWG - 600 KCMIL | 1 | 375 / 42.4 |
|  |  | Source 2 / Load | OZXA-400 | 2 AWG - 600 KCMIL | 1 | 375 / 42.4 |

|  |  | Source 2 / Load | OZXA-800E | 2 AWG - 600 KCMIL | 2 | 500/56.5 |
|  | 800-1200 | Source 1 | OZXA-1200 | 2 AWG - 600 KCMIL | 4 | 500/56.5 |
|  |  | Source 2 | OZXA-800S | 2 AWG -600 KCMIL | 4 | 500/56.5 |
|  |  | Load | OZXA-1200 | 2 AWG-600 KCMIL | 4 | 500/56.5 |

${ }^{1}$ Do not exceed this value - may cause damage to switch, voiding warranty

Table 9.3 Power Cable Torque Requirements

### 9.7 Final Equipment Inspection

Prior to energizing the transfer switch:

1. Remove any debris incurred, with a vacuum, due to shipment or installation.
2. Verify that all cabled connections are correct and that phase rotation of both sources match.
3. Check engine start connections.
4. Verify the correct connection of all control wires.
5. Check settings of all timers and adjust as necessary.
6. Adjust any optional accessories as required.
7. Check the lug torque values of the power connections.
8. Make sure that all covers and barriers are installed and properly fastened.

For simple details on start-up refer to ZTX Quick start guide document number 1SCC303022K0201.

Each ABB Zenith transfer switch is factory wired and tested. A complete information package is furnished with each switch which includes:

- Sequence of operation.
- Description and operation of all accessories supplied.
- Power panel connection diagram and schematic.
- Description and identification of all customer field connections.

Installation of ABB Zenith transfer switches includes:

- Mounting the transfer switch cabinet.
- Connection of Source 1, Source 2, and Load cables or bus bars.
- Connection of external control circuits as required.

### 9.8 Initial Energizing

Before proceeding, refer to the information package supplied with the ATS and read and understand the information on all accessories provided, including this complete document.

## Before energizing the panel

1. Confirm that installation has been performed by a qualified person and in accordance with NFPA 70 (NEC).

## Notice

Ensure this installation is properly operated and maintained in accordance with the safety practices of NFPA 70E.
2. Confirm rating label matches the installed application. Rating label is located inside the panel enclosure.
3. Confirm that cables are connected properly and torqued according to label the ATS labeling.
4. Verify that the enclosure ground connection is properly terminated.
5. Confirm that control wiring for engine start is properly terminated to the engine start contact (located in Figure 2.1, number 8). Additionally, connect all applicable digital I/O and auxiliary contact wiring.
6. Flip slide switch (Figure 2.1, number 4) to AUTO.
7. Ensure that all objects and debris are removed from enclosure, and enclosure is closed and latched.

## Energizing the panel

1. Close Source 1 circuit breaker.

NOTE: The HMI should illuminate if line voltage is present and S1 LED should light up.
2. Verify the phase to phase voltages at the Source 1 terminals.
3. Initiate auto configure from HMI DIPswitch and allow a few seconds for system parameters to set before returning the switch to off.
4. Close the Source 2 circuit breaker.
5. Start the generator engine.

NOTE: If generator voltage is present at Source 2 terminals, S2 LED should light up.
6. Verify phase rotation of S1 matches that of S 2 .

NOTE: The ATS will not allow transfer if phase rotation does not match.
7. Shut down the generator engine.
8. Place the ATS in AUTO mode from the HMI by pressing AUTO key.
9. For additional start-up guidance for the ATS, please refer to ZTX Quick Start Guide, document number 1SCC303022K0201.

## 10. Accessories

## Warning

Any installation or maintaining of accessories should be conducted by trained and authorized personnel only.
Appropriate personal protective equipment (PPE) shall be used when troubleshooting the ATS panel.
Hazardous voltage may be present. Disconnect all power sources before performing work inside the ATS panel.
Failure to do so may result in serious injury or death.

More information, see animation:
Installation of accessories - TruONE® ${ }^{\circledR}$ ATS
(https://youtu.be/qV2Kolv38GY).

### 10.1 Phase barriers

Phase barriers must be used to maintain a
clearance of 1 inch on the automatic
transfer switch types. They are included with the shipment of ZTX series ATS
Panel.

OXEB

Fig. 10.1 Mounting of phase barriers, type OXEB_

### 10.2 Auxiliary contact blocks

A07491

Fig. 10.2 Mounting of the auxiliary contact blocks, type OA_

### 10.3 HMI protective cover

UL Type 3R HMI protective cover, type OXEC21, provides protection against

Fig. 10.4 Mounting of HMI protective cover, type OXEC21 water ingress. It comes standard with NEMA 3R enclosures, and is available as a replacement part.

## 11. Replacement Parts

| ZTX series replacement parts |  |  |  |
| :---: | :---: | :---: | :---: |
| Type | Suitable for Switches | Order code | Weight (lb) |
| HMI module | $\begin{aligned} & \text { Open transition (ZTX 30-1200 A, } \\ & 200-480 \mathrm{Vac} \text { ) } \end{aligned}$ | OXAHMI-L2 | 0.42 |
| Manual handle | Open transition and delayed transition (ZTX 30-1200 A, 200-480 Vac) | OXHANDLE-1600 | 0.18 |
| Complete ${ }^{1}$ mechanism with electronics | Open transition (ZTX, 200-480 Vac) |  |  |
|  | 30-260 Amps | OXAMECH-2-L2 | 16.28 |
|  | 400-600 Amps | OXAMECH-3-L2 | 21.12 |
|  | 800-1200 Amps | OXAMECH-4-L2 | 23.32 |
| Phase barrier | 30-1200 Amps, 3 pole | OXEB1600/4 | 1.10 |
|  | 30-1200 Amps, 4 pole | OXEB1600/6 | 1.54 |

${ }^{1}$ Includes the tested, field replaceable module complete with operating mechanism, power module, and controller

Fig. 11.1 Replacement parts, available in Empower
